SELECTING DISHWASHER GLASS RACKS

To determine the number of compartments needed, place an inverted glass on diagram below. Looking down on the glass, select either 49, 36, 25, or 16 compartment size, making sure that the greatest diameter of the glass is no larger than the appropriate square. (Note: When measuring cups or mugs, be sure to allow for extension of handles.)

Then measure the overall height of the glass. The rack compartments must be deeper than the height of the glass, not only to allow for stacking, but also to reduce breakage from glasses hitting each other during the washing process.

Racks vary by manufacturer. Some have add-on risers to increase compartment depths, others are of one-piece construction.
